DETAILED ACTION

Response to Arguments

Applicant's arguments, filed 10/16/06, with respect to Claims 1-28 have been fully considered and are persuasive. The USC 103 rejection of claims 1-28 has been withdrawn.

Allowable Subject Matter

The following is an examiner's statement of reasons for allowance:

As per claims 1, and 13, "How PGP works" teaches that a PGP certificate contains the public key of the subject, long term identification information, and metadata (validity period), (Page 12). It is inherent that a certificate is invalid when the validity period expires. "How PGP works" does not teach a verifier with hashes. "How PGP works" does not teach a certificate being issued that is not signed by the certificate authority

Fischer US 5,475,826 teaches a system that has a verifier that maintains hashes of files in a security database. Fischer teaches that when files are presented they are scanned and a new hash is computed to verify the file matches the hash stored in the database, (Col 12 line 63- Col 13 line 5). Fisher does not however teach a hash table of valid certificates. Fisher does not teach a certificate being issued that is not signed by the certificate authority.

Claims 2-12, and 14-28 are also allowable due to their dependence on the allowable independent claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
